metrofile CLOUD

Google Workspace Backup

Protect your Google Workspace with Metrofile Cloud

Google Workspace has become one of the primary communication and collaboration tools in organizations today. However, Google provides only infrastructure resilience, **not full data protection and back up.**

Google is responsible for:

Infrastructure resilience

Natural-disaster resilience

Short-term data recovery

It is your responsibility to ensure:

Protection from user error or malicious acts

Protection from malware or ransomware attacks

Long-term data retention

Why do you need to back up your Google Workspace?

Accidental Data Deletion

Members of your IT team or other employees may delete various Google Drive documents.
Without an effective backup solution this can be permanent,
presenting a challenge in the future if these documents become needed.

Mismanaging duplicate files

When managing duplicate files, accidental deletion of the wrong files may occur.

Malicious actions

Disgruntled employees may sabotage or delete critical files.

Departing Employees

When an employee moves on, their accounts are terminated, risking valuable data loss.

Phishing and ransomware attacks

Email attacks are becoming more sophisticated and may fool unsuspecting employees.

Limited storage and email retention

This may lead to even more lost data.

Third-party application illicit consent attacks

Illicit consent may allow attacks that can steal important data.

Lost or stolen devices

Lost or stolen employee devices may lead to data loss.

Employees overwriting data

These accidents can happen, and can result in critical issues for your company.

Compliance Issues

Violating regulations can lead to fines and penalties.

Limited backup features and capabilities

There are other methods to back up your Google Workspace, but these methods tend to be time-consuming and costly.

metrofile

Why use Metrofile Cloud?

Ease & convenience

- **Agentless Backup:** With Metrofile Cloud's Google Workspace Backup, there is no installation process. The backup agent is already running, streamlining and simplifying the configuration process.

- **Intuitive Interface:** You can manage our solution via our user-friendly interface, reducing the time and costs spent learning the solution.

- **One solution for any workload:** We provide protection for 30+ workload types from infrastructure to SaaS apps.

Efficient

- **Fast and Flexible recovery:** Ensure business continuity with fast data recovery. Restore missing pieces of data such as emails, files, contacts, attachments and more.

- **Quick Search:** We provide an easy search functionality so you can quickly find data that you need.

- **Automated protection:** Streamline and simplify backup management.

Secure

- **End-to-end encryption:** Your sensitive data is protected with multi-level encryption.

- **Powerful reporting and monitoring:** Metrofile Cloud provides advanced capabilities for reporting and backup-status monitoring.

- **Multi-factor authentication:** This allows you to add an additional layer of security.

Ensure that you never lose another file with Metrofile Cloud's Google Workspace Backup.
